

- **WARNING!!! USE THIS PRODUCT ONLY AS DESCRIBED IN THE INSTRUCTIONS BELOW...**

## INSTALLATION INSTRUCTIONS

Our 6.2v Voltage Regulator can be installed with or without a switch between the Regulator and the Receiver Battery Pack (switch not supplied). Plug everything is correctly according to the diagram below. Once everything has been plugged in, locate the best suitable location to mount the unit, making sure that none of the wires are pulled tight and that they have some slack. This will help prevent anything coming unplugged during flight. Try to mount at least 4" away from an Engine and/or Receiver. Flat surfaces work best for mounting. Once a mounting place has been located, clean surface with Rubbing Alcohol or Acetone to remove any dirt or debris, peel off the red covering on the already attached adhesive tape. If possible, try to secure unit additionally with 2 cable ties.
